Genoatronics Introduces the EPlus™ Emergency Charger for Mobile Devices

*Powerful Emergency Charging Solution for First Responders,
Families, Campers and Boaters*

Pleasanton, California – December 16, 2013 — Genoatronics, a provider of emergency charging solutions for mobile devices, today announced the introduction of the EPlus™. Targeted for use by first responders, families, campers and boaters, the EPlus provides the ability to charge mobile devices during power outages or while in extreme outdoor terrain, using everyday household batteries as a direct current source.

The EPlus is packaged in a small form factor (4.8 x 3.6 x 1.6 inches), high visibility water-resistant and shock-resistant case and weighs 13 ounces. The package includes all cables, adapters and four AA lithium batteries for “out-of-the-box” functionality. With a 5-year shelf life, this Grab-and-Go solution is the perfect addition for emergency kits, where a user wants to store for extended lengths of time yet be assured that their supplies will be ready and useable when needed.

The smart charger is optimized for flexibility and allows the use of any readily available household or car battery (6V-12V) as a power source. The EPlus supports cables and adapters for multiple connections and power source options including car adapter, alligator clips and AA and D-cell battery holders.

“Launching the EPlus is the result of seeing an opportunity in the market to provide a unique and viable solution for consumers needing to charge their mobile devices in extreme and stressful conditions,” said David Wykiel, President, Genoatronics.

“The EPlus is an incredible new tool for first responders and is perfect to fill a void created by unreliable equipment in our market,” said R. Hunter, Disaster Responder and Director of DMATGear.com.

With completely waterproof electronics, the EPlus smart charger is environmentally protected. The smart charging feature senses the available voltage to adapt and quickly

charge most cell phones, smart phones, MP3 players and tablets, as reliably as everyday chargers (based on device and power source). The EPlus allows users to charge up to 10 times faster than a standard car adapter.

Priced at \$124.95, the product is available for purchase at www.epluscharger.com or through authorized partners.

The EPlus Emergency Charger for Mobile Devices is made in the USA.

About Genoatronics

Genoatronics designs and markets charging solutions for mobile communications devices. Founded in 2012 by Wyskiel Technologies, a design and engineering services company, the company is committed to delivering unique and viable solutions for use by a typical consumer in stressful and extreme conditions.
